MDMC Selects InRule as Technology Provider

-Due diligence firm puts edit capabilities at business manager's fingertips-

SUSSEX, Wis., Sept. 11, 2007 – MDMC, a national mortgage loan analysis firm that provides due diligence and agency delivery services to companies throughout the country, has selected Chicago-based InRule Technology, a firm that develops business rule engine technology, to provide technology that will put the process of automating complex decision logic in the hands of MDMC business managers.

This enhancement enables MDMC's business managers to create and modify the business logic, or rules, that work in concert with the firm's proprietary review systems. The use of InRule technology also makes it possible for MDMC to simplify and organize its rule sets into global, client, guide and trade stipulation segments, which helps the firm to continue to provide quality services in its due diligence process. As an added benefit, InRule reduces development costs and increases speed of deployment by putting the technology in the hands of the business managers.

"Providing our business operations managers with the ability to incorporate business logic while underwriters are reviewing loans enables them to decrease the review time and eliminate keying mistakes before they reach our quality control process," said Theresa Custer, managing director of operations. "Not only does having this robust editing system from InRule enhance our system's ability to alert underwriters to errors and/or conditions that must be checked, but business managers can also immediately implement client guidelines and trade stipulation checks more efficiently."

In addition to facilitating "on-the-fly" rule changes, InRule technology provides MDMC business managers with the ability to enhance its training program and increase underwriter

efficiency. Rule messages, which may be defined differently depending on the user, enable MDMC to identify training needs on a management level while at the same time providing underwriters with a real-time help facility.

MDMC, whose mission is to continually improve its processes while providing uncompromised review services, researched several providers in order to identify a rules engine that would meet its needs.

“We looked at usability, technical depth, superior .NET support and pricing as important factors in selecting a rules engine,” said Eric Szatmary, managing director of IT. “We needed to run rules in-process as well as Web services, and some rules engines run as Web services only. The InRule system has proven to be a perfect fit because it gives MDMC the technology and flexibility to continue to provide our clients with excellent service and quality reviews while streamlining our internal processes.”

About MDMC

Founded in 1992, MDMC provides a wide array of mortgage loan analysis services for both servicing and loan portfolios. MDMC has employees located in its Sussex, Wis. Headquarters, a Las Vegas operations center, and traveling underwriters who conduct on-site due diligence reviews. MDMC uses proprietary systems, proven methods, its experience and a host of industry tools to accurately assess a client’s portfolio and provide customized solutions based on their individual needs.

For more information about MDMC or its services visit the company’s new Web site www.mdmc.com.
